

BASIC MACHINE CHECK-UP

ARRANGE A REVIEW OF YOUR PRINTING MACHINE WITH A MOSS FIELD TECHNICIAN

We are here to help you get the most out of your printing floor – from examining your inventory to training new machine operators. We put the expertise of our experienced MOSS technicians at your service to maximize the performance of your MOSS equipment.

PROGRAM INFORMATION

Perform a thorough examination of each functional area of the machine.

Adjust machine settings, if required.

Provide operator and maintenance personnel with mini-training sessions which can be personalized to meet your requirements.

End each visit by meeting the appropriate factory personnel to summarize findings and discuss recommended actions.

Upon inspection accomplishment, we provide a final detailed report including a summarized list of issues and findings and a list of recommended spare parts.

The exact content of each visit can be tailored to your specific needs.

VISIT DURATION

The MOSS technician's stay can be adapted to the complexity and to the number of machines he will be required to audit.

PROGRAM PRICING

The planned visit offers the opportunity to save on travel expenses instead of taking emergency or last minute measures.

Parts recommended from a check-up are subject to a discount if ordered in coincidence with the visit.

If you wish to take advantage of this program, we can estimate the cost based on the desired visit plan. We will then invoice the visit upon the return of our technician.

We aim to schedule service visits at least one month in advance in order to let you have the same MOSS technician visiting your plant and also to have a better chance of saving on travel expenses.
